

”Your **finger**
is the **key**“

ekey home integra

Easy and secure access with fingerscan

Open your front door easily and conveniently with ekey home integra.

ekey home integra combines the sophisticated fingerscan-technology of the market-leader elegantly and shapely with your front door. The integrated finger scanner offers easy access without keys, codes or cards. The corresponding control panel takes almost no place and is securely located in the door leaf.

Elegance, convenience and security all in one – ekey home integra:

Your finger is the key

SIMPLE

Open doors and gates or activate the alarm system with only one finger swipe. Authorizations may be assigned independently with no need for any technician or PC.

CONVENIENT

The key is literally always in your hands. The intelligent software learns with every use and recognizes the growth of child fingers and the alteration of user habits.

SECURE

Your unique fingerprint is much more secure than a key which can be either stolen or lost. A system manipulation from outside is impossible.

ekey home integra

The biometric access solution

How biometrics works

Biometric finger scanners have been used in banks and high security areas for many years. With ekey home integra, this easy, convenient and secure access solution gets affordable and practical for everybody. ekey uses line sensors which capture the individual fingerprints. The biometric characteristics of the user's finger are transformed into a binary code which is then saved. ekey home integra is the elegant way to protect your doors securely and conveniently – in the whole house!

A secure and proven method.
